EDUCATION

Rutgers, The State University of New Jersey

New Brunswick, NJ

B.S. Information Technology & Informatics | Minor: Computer Science

Anticipated: May 2027

Summary: Rutgers University ITI student with a Computer Science minor and CompTIA Security+ certification, seeking entry-level opportunities in IT support, cybersecurity, SOC, or network operations. Strong foundation in networking, security fundamentals, Windows/Linux environments, troubleshooting, and technical problem-solving through academic and independent projects.

PROJECTS

Enterprise Security Monitoring & Active Directory Lab

- Built a virtualized Active Directory lab environment using VirtualBox, Windows Server 2022, and Kali Linux to simulate a small enterprise network.
- Configured Splunk to ingest Windows Security/System logs and Sysmon telemetry for centralized security monitoring and event analysis.
- Simulated attack activity, including RDP/SSH brute-force attempts and Kerberoasting, to generate realistic authentication and Kerberos-related telemetry.
- Created SPL searches, dashboards, and alerts to detect repeated authentication failures, suspicious login activity, and potential Kerberos abuse.
- Applied Group Policy settings to strengthen password requirements and restrict administrative privileges within the domain.

Job Application Tracker - Java, JavaFX, MVC

- Built a desktop application with CSV-based persistent storage, implementing strong input validation and error handling to ensure data integrity.
- Developed administrative features for record management and filtering, simulating operational monitoring dashboards.

Network Security & Traffic Analysis Lab

- Designed a segmented network environment with multiple VLANs, routing, DHCP, DNS, NAT, and access control policies.
- Configured firewall and ACL rules to restrict inter-VLAN communication and enforce least-privilege network access.
- Captured and analyzed TCP/IP, DNS, ICMP, and HTTP/S traffic using Wireshark to identify normal and anomalous communication patterns.
- Troubleshooted simulated connectivity, DNS resolution, and access-control failures using packet captures and command-line network utilities.
- Documented network topology, security controls, and root-cause analysis for each troubleshooting scenario.

SKILLS

- **Technical:** Windows & macOS Administration, Networking Fundamentals (TCP/IP, DNS, DHCP), Basic Network Security & Firewall Configuration, Endpoint Troubleshooting, VPN, MFA, Microsoft 365
- **Tools & Platforms:** ServiceNow, Jira, Remote Support Tools (TeamViewer, AnyDesk)
- **Programming:** Java, Python, C, C++, SQL, JavaScript, HTML/CSS
- **Certification:** CompTIA Security+
- **Languages:** English, Mandarin
